Wood Protection

Prevent Costly and Permanent Damage to Your Wood and Woodwork

Humidity Control Is Essential for Wood Floor Protection

Wood floors and furnishings add beauty and uniqueness to your home that you should enjoy for a lifetime. But did you know that uncontrolled relative humidity (RH) in your home can cause unsightly and expensive damage? In order to properly protect wood furnishings and floors, relative humidity levels must be kept within a consistent range all year round.

Do you know your home's relative humidity level?

Chances are, you have too little or too much humidity in your home, or both, throughout the year. Each situation has its own dilemmas.

Too little humidity

The main causes of low humidity are an overly arid climate or simply the process of heating your home. When you turn up the heat, dry air absorbs moisture from everything inside your home, including you! This can cause your beautiful wood floors to shrink, crack, and creak.

Too much humidity

Humid weather as well as day-to-day activities, such as breathing, cooking, and doing laundry, can add nearly 25 pounds of moisture to a home every day. This increased humidity can cause wood to expand and warp.

It's chemistry

Your woodwork, wood floors, and wood furniture are hygroscopic—capable of absorbing and releasing moisture. Uncontrolled humidity can wreak havoc. It's important to maintain proper humidity levels. If RH is too low, your indoor air will absorb water from the wood, causing it to shrink. If RH is too high, the wood will take on moisture, causing it to swell. When indoor RH changes quickly, the dimensions of woodwork, floorboards, and furniture change rapidly and warping and cracking can occur.

Industry experts recommend keeping your home's relative humidity levels between 40–60% continually, year round to help protect wood floors, trim, cabinetry, furniture, and other furnishings.

While balanced humidity exists between 40 and 60%, it's important to remember that outdoor temperature and other home factors will impact what relative humidity level is attainable and recommended for your house. Talk with your AprilAire Healthy Air Professional to learn more.

If you neglect relative humidity in your home, you'll pay for it later. The warranty from your floor manufacturer does not typically cover damage resulting from excessive humidity.* Extra care must be given to the humidity level at the time of installation and beyond.**

Humidity control: every climate, every season, every day

AprilAire Whole-Home Humidifiers and Dehumidifiers automatically control the amount of moisture in the air to continually maintain optimal indoor relative humidity. Once installed and properly maintained, you never have to worry about the problems that result from unregulated humidity again.

Performance & peace of mind

AprilAire Humidifiers and Dehumidifiers are professionally installed and maintained by your local heating and cooling contractor. They are designed and assembled in the USA utilizing US and global components and come with a five-year warranty. No matter what the weather brings, you can count on AprilAire.

Is the dryness of your home's air under control?

- Low relative humidity can make you more susceptible to catching a cold.* And flu viruses have been linked to speedier progression and transmission in dry air.**
- The respiratory infections caused by cold and flu viruses are a leading trigger of asthma in children.† Plus, cold, dry air on its own can aggravate asthma.
- Static shock and dry, itchy skin, eyes, and throat can all be traced back to air that's not properly humidified.

Dry indoor air is more than just an inconvenience. It's a threat to the health and comfort of your family—as well as your budget. Thankfully, with AprilAire, there's something you can do to control it.
